

ASHTREE GLASS
ASHTREE GLASS

"E" Approved All Round Visibility Solutions From Ashtree Glass

Attention is now focussed more than ever on visibility around worksite machinery. We give workers hi-viz clothing, now let machine operators see them.

Standards such as ISO 5006 : Jan 2007, 2006/42/EC, ISO 14401-1 and 14401-2: Instruct manufacturers of different types of machinery what areas have to be visible to operators to help prevent accidents. Ammann Yanmar requested samples of an Ashtree mirror and arm to meet the requirements of ISO 5006. The mirror met their requirements but the arm needed to be modified to suit their specific requirements.

This image shows the mirror, part number M430CE, and mirror arm, part number S913, mounted on the outside of the cab.

As you can see from this image the mirror allows visibility of a test area marked on the floor. The mirror arm has been modified by Amman staff and Ashtree now manufacture to their specifications.
